PROFESSIONAL SUMMARY

Computer Science student and DOST Scholar with a solid foundation in software engineering, native Android mobile development, and interactive systems simulation. Skilled in developing scalable architectures across Kotlin (Android MVP), Java (JavaFX), Python (Django), C#, and Godot. Recognized for competitive robotics excellence, technical mentorship, and campus leadership.

TECHNICAL SKILLS

- **Programming Languages:** Kotlin, Java, C#, C++, Python, GDScript, SQL
- **Frameworks & Tools:** Android Studio (MVP), Django, JavaFX, .NET WinForms, Godot Engine
- **Databases & Utilities:** MySQL, SQLite, Git, GitHub, XML, Vercel, Figma
- **Core Concepts:** Object-Oriented Programming (OOP), Data Structures & Algorithms, UI/UX Design, Simulation Logic

FEATURED PROJECTS

DeleGate – Project & Production Tracker

Technologies: Python, Django, SQLite/PostgreSQL

- Architected and deployed a web application for project progress tracking, team workflow coordination, and resource delegation.
- Designed relational models, customized user permission flows, and implemented responsive frontend management views.

StashRaid – Android Study & Notes Application

Technologies: Kotlin, Android Studio, XML

- Developed an offline-capable mobile study application utilizing Model-View-Presenter (MVP) architecture for clean modular separation.
- Built responsive custom XML layouts and maintained local data persistence for rapid note organization and revision indexing.

WildFEAST – Online Canteen Ordering System

Technologies: Java, JavaFX, MySQL

- Developed an ordering platform featuring distinct portal dashboards for cafeteria merchants and student customers.
- Engineered normalized relational database tables and implemented JDBC integration for live order queues, inventory updates, and transactions.

Project Equinox / SeasonFuzzy – Systems Simulation Engine

Technologies: C#, Windows Forms

- Designed a desktop simulation engine modeling multi-variable weather dynamics, fuzzy logic decision systems, and population evolution.
- Created real-time graphic visualization components and algorithmic state evaluators.

Encore & Revelation – 2D Interactive Games

Technologies: Godot Engine, GDScript

- Built 2D gameplay prototypes with custom physics loops, tilemap collision boundaries, and rhythm-synchronized mechanics.
- Created in-engine level design utilities and dynamic event handling routines.

EDUCATION

Cebu Institute of Technology – University (CIT-U)

Bachelor of Science in Computer Science | Cebu City, Philippines | 2024 – Present

- DOST Undergraduate Scholar

Cebu Institute of Technology – University (Senior High School)

STEM Track | Graduated with Honors | 2022 – 2024

LEADERSHIP & INVOLVEMENT

Department of Science and Technology Scholars' Association (DOST SA CIT-U)

Creatives Committee Member & Director for Events and Logistics | 2024 – 2025

- Led graphic and visual branding design and supported operational event logistics for scholar assembly initiatives.

Regional & National Networks

- Member, DOST SA SIETE (Regional) | SPARKS Collective Member *(2024 – 2025)*
- Member, START - DOST (National) *(2024 – Present)*

HONORS & ROBOTICS COMPETITIONS

- Robotics Mentor, RoboQuest 2023 (Mentored 6th place team)
- 2nd Place, CESAFI Robotics Cup (2023)
- 2nd Place, Regional Science, Technology, and Math Fair – LIKHA (2022)
- 1st Place, Division Science, Technology, and Math Fair – LIKHA (2022)
- 3rd Place, National Virtual Robotics Competition (2021)
